

# KABELDOZEN JSL "boxline" serie

## E90-FUNCTIEBEHOUD

Alle kabeldozen van JSL worden gekenmerkt door een hoge en robuuste constructie-kwaliteit, die stoelt op een ver geautomatiseerd productieproces ondersteund door een doorgedreven kwaliteitscontrole. Dit maakt dat JSL kabeldozen een groot gebruiksgemak koppelen aan alle geldende normen en veiligheidsvoorschriften van de Europese normerings-instituten. De bodem(s) van deze kabeldozen zijn uiteraard afgestemd om met alle gebruiksgemak het JSL installatiemateriaal zoals klemmen en connectoren te kunnen gebruiken. (Maar evenzeer met de DIN rails). Elke JSL kabeldoos is gemaakt van HALOGENVRIJ materiaal.

### Norm's compliance:

-IEC 60670	Enclosures
-EN50262	Metric Cable glands
-EN60423	Metric Cable glands
-EN 60 998-2-4	Tórix
-EN 60998-2-1	Terminals and Junction boxes
-EN 60998- 2-2	Connectors

Category E90 according DIN 4102-part 12. -IP66, IK08 -Fixing by steel anchor dowels treated for fire conditions Certified at Deutsches Institut für Certified Bautechnik. Steatite ceramic connectors resistant to furnacehigh temperature, certified VDE. Insulation Class II. - Boxes, V0 Duroplast selfextinguishing in RAL 2003, certified KEUR KEMA according to IEC EN 60670-22. Halogen-free.

## Fire Resistance Laboratory

### APPLICANT:

JSL – Material Eléctrico S.A

### TEST:

Determination of the Fire Resistance.

- Test standard: Test protocol based on DIN 4102-12:1998
- Specimen: Electrical boxes fire resistant.

- Manufacturer: JSL – Material Eléctrico S.A
- References: "J100B-F"; "J100B-F"; "J160B-F"; "J200B-F"

Nr. 8855/13  
Translation of original Spanish Report  
English Version

## APPLICANT

JSL – Material Eléctrico S.A.  
 Rua Mário Castelhano nº 3  
 Zona Industrial Queluz de Baixo Ap. 12  
 2746-953 Queluz Portugal  
 Quotation acceptance date: 20<sup>th</sup>-Feb-2013

## TEST SPECIMENS

Type of specimen: Electrical boxes fire resistant.  
 Manufacturer: JSL – Material Eléctrico S.A  
 References: "J100B-F"; "J100B-F"; "J160B-F"; "J200B-F"

## TESTS PERFORMED

Fire Resistance test protocol according to DIN 4102-12:1998

Test date: 11<sup>th</sup>-feb-2013  
 Place of test performance: Arganda del Rey's facilities

### Report contents

1.- Test specimens .....	Page 3
2.- Test performed .....	Page 4
3.- Specimens assembly .....	Page 5
4.- Test conditions .....	Page 5
5.- Results .....	Page 6
6.- Classification .....	Page 7
ANNEX 1: Graphic of evolution of temperature inside the furnace .....	Page 9
ANNEX 2: Photographs .....	Page 10
ANNEX 3: Technical report .....	Page 12

This report is a translation of the Spanish Test Report dated 21<sup>st</sup>-Mar-13. In case of doubt, the Spanish version of the Test Report prevails.

The results of this Test Report make sole and exclusive reference to the specimen tested, and not to the product in general.

*"This test report details the construction method, test conditions and achieved results when a specific construction item, as the one herewith described, has been tested following the procedure described in DIN4102-2. Any significant deviation regarding size, construction details, loads, tensions, sample limits or extremes of this, which are not included in the test results direct scope specified in the correspondent test method, will not be covered by this test report."*

The information held in this Test Report is of a confidential nature, meaning the Laboratory will not provide information in relation to this report to third parties, except with the authorization of the Applicant.

It is not allowed to reproduce partially this Test Report without the Laboratory's written approval.

### I.- TEST SPECIMENS

Reception: 11<sup>th</sup>-Mar-2013

- Units: 7 specimens
- The specimens and all the components are received packaged.
- The specimens have been sent and selected by the applicant.

### Documentation:

The technical documentation required for the issuance of this report has been received on 11<sup>th</sup>-Mar-2013.

### Description:

The main descriptive characteristics of the specimens have been supplied by the applicant. This information is included in the Annex 3 of this Test Report.

Specimen	Reference	Dimensions	Classification
8855A	J100B-F	116 x 116 x 60	E90
8855B	J100B-F	116 x 116 x 60	E90
8855C	J160B-F	166 x 116 x 70	E90
8855D	J200B-F	216 x 116 x 90	E90

The specimen 8855B is protected by a metal casing of dimensions (120 x 127 x 65) mm and 1 mm thickness:

*It is not allowed to reproduce partially this Test Report without the Laboratory's written approval.*

Page 3 of 25

## 2.- TESTS PERFORMED

Due to there is no standard for this kind of products, the fire test according to DIN 4102-12:1998 has been adapted in order to evaluate the performance of these electrical boxes.

Due to the functionality in case of fire of these electrical boxes is to maintain the circuit integrity, the specimens were subjected to standard fire conditions defined by DIN 4102-2 checking by passing current through systems cables, wherein said current flow is maintained throughout the heating process.

### Test parameters

- **Heating Curve:** According to the thermal program described by the Standard DIN 4102-2:1977-09. The temperature control is performed by placing 4 Ø 1,6 mm type K sheathed thermocouples placed 100mm apart from the plane of the specimen.
- **Specimen connection:** Since the objective is to verify the supply continuity, if one of the electrical phases fails the entire system supply fails. The switch poles have been fed by high temperature resistant cables and these cables feed some bulbs in order to detect the possible failure of supply continuity.
- **Connection cable:** To evaluate the supply continuity, the following types of cables had been used in each specimen:

Specimen	Cable Type	Outer Diameter (mm)
8855A	TUMKA NHXH FE180 E90 2x1,5mm <sup>2</sup> 0,6/1 kV	13,30
8855B	TUMKA NHXH FE180 E90 2x1,5mm <sup>2</sup> 0,6/1 kV	13,30
8855C	TUMKA NHXH FE180 E90 2x1,5mm <sup>2</sup> 0,6/1 kV	13,30
8855D	TUMKA NHXH FE180 E90 2x1,5mm <sup>2</sup> 0,6/1 kV	13,30
	TUMKA NHXH FE180 E90 3x2,5mm <sup>2</sup> 0,6/1 kV	14,90

### Classification criteria

In accordance with DIN 4102-12:1998 paragraph 3.2.2, the specimens are classified according to the following table:

Table 1: Circuit integrity classes

Class	Shortest length of time circuit integrity is maintained, in minutes
E 30	30
E 60	60
E 90	90

Considering that the operating time is the time during which the integrity of the electrical circuit is maintained.

## 3.- SPECIMEN ASSEMBLY

The specimens were installed vertically on a wall of lightweight concrete with the arrangement given below:

Once the specimens have been installed electrical connections are made from each of the specimens separately.

The power supply is three-phase ( $400 \pm 40$ ) V and 50 Hz with neutral ground at least 3 A and short circuit current  $\geq 10$  A. This current is taken directly from the control panel of the laboratory. Fuses of conductor protection with nominal current of 3A and bulbs with nominal tension of 240 V nominal electric power of 60 W and luminescent diode to indicate the current flow.

## 4.- TEST CONDITIONS

<b>Furnace temperature. Heating curve.</b>	According to the thermal program described by the Standard DIN 4102-2:1977-09.	
<b>Electrical conditions</b>	380V 50Hz	
<b>Ambient conditions at the beginning of the test</b>	Ambient temperature (°C) ≡ T <sub>0</sub>	12
	Relative humidity (%)	62

**5.- RESULTS**

The test lasted 91 minutes.

The test was stopped by mutual agreement with the applicant after 91 minutes.

**Observations during the test**

<b>Minute</b>	<b>Observation</b>
0 .....	The test starts at 16h 48min 42s
30 .....	Without significant changes.
60 .....	Without significant changes.
90 .....	Without significant changes.
91 .....	End of the test by mutual agreement with the applicant.

**Observations after the test**

After the test the melting of the plastic elements and the integrity of the metal case of the specimen 8855B is observed.

The electrical circuit continuity is successfully checked.

**Expression of results**

	Specimen			
	8855A	8855B	8855C	8855D
Circuit integrity (E)	91 minutes	91 minutes	91 minutes	91 minutes
Continuity after the test	COMPLIES	COMPLIES	COMPLIES	COMPLIES

**6.- CLASSIFICATION**

Assimilating the classification as provided in DIN 4102-12:1998 paragraph 3.2.2, tested specimens could be classified such as:

Muestra	Referencia	Dimensiones	Tipo de Cable	Clasificación
8855A	J100B-F	116 x 116 x 60	TUMKA NHXH FE180 E90 2x1,5mm <sup>2</sup> 0,6/1 kV	E90
8855B	J100B-F	116 x 116 x 60	TUMKA NHXH FE180 E90 2x1,5mm <sup>2</sup> 0,6/1 kV	E90
8855C	J160B-F	166 x 116 x 70	TUMKA NHXH FE180 E90 2x1,5mm <sup>2</sup> 0,6/1 kV	E90
8855D	J200B-F	216 x 116 x 90	TUMKA NHXH FE180 E90 2x1,5mm <sup>2</sup> 0,6/1 kV	E90
			TUMKA NHXH FE180 E90 3x2,5mm <sup>2</sup> 0,6/1 kV	E90

"Due to the nature of fire Performance tests and the consequent difficulty in measuring the uncertainty of the grade of fire resistance, it is not possible to show a known degree of accuracy in the result".

**E90 BOX LINe FIRE** waterproof junction boxes from JSL

**Functionality:**  
Full functionality for 90 minutes (Category E90) according to DIN 4102 Part 12. For circuits and wiring installations where safety of the facilities are crucial, such, power generation places, emergency lighting, fire detection, alarm detectors and security in general, ventilation and smoke exhaust and control of fire attack equipment such as fire pumps, "sprinklers," Circuit and related devices.

**Suitable for:**  
Assembling and manufacturing lines, Metropolitan tunnels, garages, security zones and emergency or evacuation paths, Central control headroom's, hospitals, schools and electrical and telecommunications "survival" lines in general. Also suitable for environments with corrosive, humid or with extreme temperatures environments or submitted to severe IK shock.

**Special Features:**

- Halogen free raw materials,
- IP66
- IK08
- Under normal temperature environmental conditions: -15 ° C to +45 ° C
- Wall mounting through-anchor or bushings; steel treated for fire conditions Certified by Deutsches Institut für Bautechnik
- Static ceramic connectors, high furnace temperature resistance.
- Insulation class II
- Boxes, Duropal extinguishing V0 in color RAL 2003, KEMA-KEUR certified according IEC EN 60690-22.

**Dimensions and References:**

J100B-F: 116x116x60 mm, accepts cables or tubes from 4 to 25 mm diameter.  
J100S-F: 116x116x60 mm receiving directly Metric Glands M20 V0 for cables from 8 to 13 mm external diameter or VD16 and/or VD20 robe, using threaded mountpiece M20/GSV from JSL.  
J160B-F: 166x116x70 mm, accepts cables or tubes from 4 to 25 mm diameter.  
J200B-F: 216x166x90 mm, accepts cables or tubes from 4 to 32 mm diameter.

**Connection capacity:**  
6 poles, each pole supporting rigid or flexible copper conductors from 0.5 mm<sup>2</sup> to 4 mm<sup>2</sup> in the case of the references J100B-F and J100S-F.  
8 poles, each pole supporting rigid or flexible copper conductors from 0.5 mm<sup>2</sup> to 6 mm<sup>2</sup> in the case of the references J160B-F.  
8 poles, each pole supporting rigid or flexible copper conductors from 0.5 mm<sup>2</sup> to 10 mm<sup>2</sup> in the case of the references J200B-F.

**NOTICE:** The boxes may be provided with other ceramic connectors capabilities (if necessary). Suitable for cables: Datwyler, Eupen, Nebras, Trelle, Leoni Studer, Helukabel, Pryman and others in accordance with DIN 4102 Part 12. **IMPORTANT:** the listed wiring capacity of the terminal ceramic blocks, it's merely an indication.

**Installers Manual for JSL BOXLINE FIRE boxes ref. J100BF, Ref. J160BF and Ref. J200BF**

**Fixing:**

The boxes can be fixed by internal fixing holes according datasheet and figures supplied with each box in case of fixing on concrete walls or ceilings.

Drill the holes to put the special metal dowels. Insert the metal dowels on the concrete walls according the image supplied. Fix the box using the pre-made holes on the base of the box, put the washers and screw the M6 nuts like in the figure.

In case of cable tray use, the dowels supplied must be changed by "Umbraco" M6x25 steel screws. This screws will fix the cable tray plates to the Boxline Fire E90 Boxes.

**Cable and tube installation:**

BF version with stepped rubber grommets:

Cut the grommet at the mark corresponding to the diameter of the cable or tube and insert cable through the hole created. See the following figure:

**Bars and wires connection:**

Connect the wires of the E90 cables to the Steatite bars according the projected circuit and the type and capacity of the bars ordered.

**PLEASE BE CAREFUL** with the layout and the proper separation of the wires and between wires and the metal parts fixing components. Earth fixing screws must be ordered in case of necessity of earth protection for the supporting bar and dowels. It's advised to use rock wool mate in order to prevent any contact or connection between crossing wires and the metal supporting bars

**Box closing:**

For all the models: put the cover and the supplied special screws in the 4 holes and then screw them (3/4 of turn)

**JSL Boxline Fire external and internal dimensions:**

Product : connecting box for fixed electrical installations  
Trade name : JSL  
Types : J100L, J100B and J100S

The product and any acceptable variation thereto is specified in the Annex to this certificate and the documents therein referred to.

DEKRA hereby declares that the above-mentioned product has been certified on the basis of:  
- a type test according to the standard IEC 60670-1:2002, IEC 60670-22:2003 and IEC 62262:2002  
- an inspection of the production location according to CENELEC Operational Document CIG 021  
- a certification agreement with the number 961826

DEKRA hereby grants the right to use the KEMA-KEUR certification mark.

The KEMA-KEUR certification mark may be applied to the product as specified in this certificate for the duration of the KEMA-KEUR certification agreement and under the conditions of the KEMA-KEUR certification agreement.

This certificate is issued on: 13 May 2011 and expires upon withdrawal of one of the above mentioned standards.

Product : connecting box for fixed electrical installations  
Trade name : JSL  
Types : J200 L and J200 B

The product and any acceptable variation thereto is specified in the Annex to this certificate and the documents therein referred to.

DEKRA hereby declares that the above-mentioned product has been certified on the basis of:  
- a type test according to the standard IEC 60670-1:2002, IEC 60670-22:2003 and IEC 62262:2002  
- an inspection of the production location according to CENELEC Operational Document CIG 021  
- a certification agreement with the number 981626

DEKRA hereby grants the right to use the KEMA-KEUR certification mark.

The KEMA-KEUR certification mark may be applied to the product as specified in this certificate for the duration of the KEMA-KEUR certification agreement and under the conditions of the KEMA-KEUR certification agreement.

This certificate is issued on: 13 May 2011 and expires upon withdrawal of one of the above mentioned standards.

Certificate number: 2143500.04

ANNEX TO KEMA-KEUR CERTIFICATE 2143500.04

page 1 of 1

## SPECIFICATION OF THE CERTIFIED PRODUCT

**Product data**  
product : connecting box for fixed electrical installations  
trade name : JSL  
types : J200 L and J200 B  
degree of protection : IP 66  
classification impact : IK3  
material : thermoplastic  
rated installation voltage : 500V~  
dimensions : 216x166x90mm  
colour : grey

**Product data - type J200L**  
model : closed

**Product data - type J200B**  
model : with rubber grommets B32 for cable or pipe diameters 16mm, 20mm, 25mm and 32mm.

## TESTS

**Test requirements**  
IEC 60670-1:2002 including C1:2003 and A1:2011  
IEC 60670-22:2003  
IEC 62262:2002

**Test result**  
The test results are laid down in DEKRA test file 2143500.04.

## Conclusion

The examination proved that all test requirements were met.

Tested by :  R. van Daalen

Checked by :  A.A. Mackenbach
